

→→→ Temporary detour route for County N traffic destined for South I-39. This detour and others in the area will be in effect during the 2004 construction season. Delays may be reduced by using alternate routes.

Who?

Commuters and tourists who travel US 51/WIS 29, County N, Hummingbird Road, Bridge Street, Washington Street, and County X within the Wausau area will be affected by area construction.

What?

Motorists should expect delays on these roads during peak travel hours. Delays can be minimized by taking alternate routes.

Where?

See map for specific locations of these major work zones.

Why?

This is the first of several major construction seasons scheduled within the Wausau area. Major local roadways such as County N and County R will be constructed from 2003 to 2005 to provide safe and efficient alternate routes during the later years of mainline construction on US 51/WIS 29.

When?

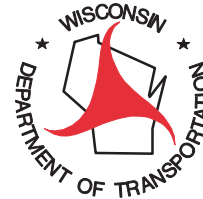

Major construction in the Wausau area is scheduled to occur from 2003 through 2010. This includes the reconstruction of the US 51/WIS 29 Corridor.

To avoid delays, use alternate routes.

Wausau Area Work Zones

2004

(current as of February 2004)

During construction, traffic will be affected on and along US 51/WIS 29 and County N (including the McCleary/Snake Bridge replacement) and Hummingbird Road. Other major projects include Bridge Street, County X, and Washington Street.

Traffic delays are expected during peak travel hours. However, delays can be minimized if local commuters use alternate routes to avoid construction zones.

The Wisconsin Department of Transportation (WisDOT) and Marathon County appreciate your assistance in keeping traffic flowing through the area.
